WorkHatch Internship Program – Working Guidelines

Overview

This internship is designed to simulate a real-world company environment where you will work on industry-level projects. You will be provided with a base project repository and assigned tasks, similar to how work is done in startups and companies.

Instead of building from scratch, you will work on existing projects, understand the codebase, and contribute by implementing new features, improvements, and solutions. This helps you gain practical experience and showcase your real skills.

Your work will be shared with startups and companies, giving you the opportunity to demonstrate your capabilities. Based on your performance, top candidates may be considered for real job opportunities.

Internship Structure (30 Days)

This internship runs for **30 days** and includes **2 projects**.

Project 1 (Day 1 – Day 20)

- Understand the base code
- Complete assigned tasks
- Submit your work before Day 20

Project 2 (Day 15/16 – Day 30)

- Starts around Day 15 or 16
- Work on a new project alongside final phase of Project 1
- Submit final work by Day 30

You will be working on real, ongoing projects where your role is to contribute as a developer, bring fresh ideas, and improve the system.

Give your best effort—your submissions will be reviewed by companies

Opportunities & Outcomes

Your submissions will be reviewed and shared with startups and companies collaborating with the platform.

Based on your performance:

- Companies may identify candidates who fit their requirements
- Strong performers can be shortlisted for real job opportunities
- Your work acts as a direct demonstration of your skills

This internship is not just about completing tasks—it is about proving your ability to work in real-world scenarios and standing out through your work.

Final Note

Give your best effort in every task.
This is your opportunity to learn, build, and showcase your skills in front of real companies.

Project Workflow (UI/UX Design)

Step 1: Access the Base Project

You will be provided with a GitHub repository link containing the base code for the project.

- Download the repository as a ZIP file
  OR
- Clone the repository using Git

Step 2: Setup and Explore the Project

- Open the project in VS Code or any preferred IDE
- Run the project locally (if possible)
- Explore all pages, components, and features

Step 3: Understand the Product from Code

Before starting the design, you are expected to:

- Analyze the project structure
- Understand the user flow and functionality
- Identify key screens, components, and interactions
- Observe current UI issues and improvement areas

Step 4: Design in Figma

- Create a new Figma file
- Redesign existing screens or create improved UI
- Design additional screens if required
- Focus on:
  - Better user experience (UX)
  - Clean and modern UI
  - Consistent design system (colors, typography, spacing)

Step 5: Prepare Final Design File

After completing the tasks:

- Organize all screens properly in Figma
- Create reusable components (buttons, cards, etc.)
- Ensure the design is clear, complete, and easy to understand

Submission Requirements

You are required to submit the following:

1. Figma Design Link

Provide the link to your Figma file containing:

- Complete design of your work
- All screens and user flows
- Reusable components (buttons, cards, etc.)
- Clean and well-organized design structure

2. Understanding Report (PDF)

Create a document explaining your understanding of the base project, including:

- Product structure and user flow
- Key screens and functionalities
- Existing design patterns and components
- Identified UI/UX issues and improvement areas

3. Work Report (PDF)

Provide a detailed report describing your work:

- Tasks completed
- Design approach and decisions
- Challenges faced during the design process
- Solutions applied
- Tools used (e.g., Figma)
- Improvements and new design ideas implemented

Final Submission

Submit the following through the submission portal:

- Figma Design Link
- Understanding Report (PDF)
- Work Report (PDF)

Important Guidelines

- Ensure all submissions are **original and properly implemented**
- Maintain **clean, readable, and well-structured design**
- Write reports that are **clear, concise, and professional**
- Follow all **deadlines strictly**
- Focus on **understanding the project before implementation**

Objective

- Gain **real-world project experience** by working on industry-level tasks
- Build **practical skills** through hands-on development
- Showcase your **problem-solving and technical abilities**

Real Outcome & Opportunity

- Your work will be **reviewed by startups and companies**
- Strong solutions may be **used or considered by companies in real scenarios**
- Top performers can **stand out based on their work quality**
- Companies may **approach you for opportunities** based on your submissions
- Your registered email may be used for **further communication regarding opportunities**

We wish you a successful and rewarding experience with WorkHatch.
Your work today can shape your opportunities tomorrow.
