

OROVE

OROVE Experience Program – Participant Guide

Overview

The OROVE Experience Program is designed to bridge the gap between learning and professional work.

Instead of watching tutorials or completing isolated exercises, you will work on realistic projects inside a structured professional workflow inspired by modern engineering and product teams.

Throughout the program, you will receive an existing project repository along with clearly defined objectives, milestones, and deadlines. Rather than building projects entirely from scratch, you will learn how to understand an existing codebase, improve it, solve practical challenges, and deliver high-quality work—similar to the way software teams operate.

This program provides a safe environment where you can experiment, make mistakes, receive feedback, and improve your skills before entering a real workplace.

Your submissions will reflect your technical abilities, problem-solving approach, documentation, and overall professional mindset.

Outstanding participants may be considered for future startup opportunities through WorkHatch, subject to company requirements and role availability.

Program Structure (30 Days)

The Experience Program runs for 30 days and consists of two structured work assignments.

Project 1 (Day 1 – Day 20)

- Understand the base code
- Complete assigned tasks
- Submit your work before Day 20

Project 2 (Day 15/16 – Day 30)

- Starts around Day 15 or 16
- Work on a new project alongside final phase of Project 1
- Submit final work by Day 30

Throughout the program, you will work on realistic projects designed to strengthen your technical, analytical, and professional skills.

The objective is not simply to finish tasks—but to learn how professional teams approach, improve, and deliver projects.

Opportunities & Outcomes

Completing the Experience Program helps you build confidence before entering a real workplace.

Through this program you will:

- Experience structured professional workflows
- Improve your ability to work with deadlines
- Work on realistic project assignments

Outstanding participants may also be considered for future startup opportunities through WorkHatch, depending on company requirements and available roles.

Final Note

Approach every assignment with curiosity, discipline, and professionalism.

This program is your opportunity to practice, improve, and build confidence in a realistic working environment before beginning your professional career.

Every challenge you solve contributes to your growth.

Project Workflow (UI/UX Design)

Step 1: Access the Base Project

You will be provided with a GitHub repository link containing the base code for the project.

- Download the repository as a ZIP file
OR
- Clone the repository using Git

Step 2: Setup and Explore the Project

- Open the project in VS Code or any preferred IDE
- Run the project locally (if possible)
- Explore all pages, components, and features

Step 3: Understand the Product from Code

Before starting the design, you are expected to:

- Analyze the project structure
- Understand the user flow and functionality
- Identify key screens, components, and interactions
- Observe current UI issues and improvement areas

Step 4: Design in Figma

Create a new Figma file

Redesign existing screens or create improved UI

Design additional screens if required

Focus on:

- - Better user experience (UX)
 - Clean and modern UI
 - Consistent design system (colors, typography, spacing)

Step 5: Prepare Final Design File

After completing the tasks:

- Organize all screens properly in Figma
- Create reusable components (buttons, cards, etc.)
- Ensure the design is clear, complete, and easy to understand

Submission Requirements

You are required to submit the following:

1. Figma Design Link

Provide the link to your Figma file containing:

- Complete design of your work
- All screens and user flows
- Reusable components (buttons, cards, etc.)
- Clean and well-organized design structure

2. Understanding Report (PDF)

Create a document explaining your understanding of the base project, including:

- Product structure and user flow
- Key screens and functionalities
- Existing design patterns and components
- Identified UI/UX issues and improvement areas

3. Work Report (PDF)

Provide a detailed report describing your work:

- Tasks completed
- Design approach and decisions
- Challenges faced during the design process
- Solutions applied
- Tools used (e.g., Figma)
- Improvements and new design ideas implemented

Final Submission

Submit the following through the submission portal:

- Figma Design Link
- Understanding Report (PDF)
- Work Report (PDF)

Program Guidelines

Participants are expected to maintain professionalism throughout the Experience Program by submitting only their own original work and following clean coding practices. All reports should be clear, well-structured, and professionally written, reflecting both your technical understanding and thought process. Please ensure that project requirements are carefully understood before making any modifications to the codebase, and that all assignments are completed and submitted within the specified deadlines. The primary goal of this program is to encourage learning through practical experience, continuous improvement, and real-world problem solving.

Program Objective

The OROVE Experience Program is designed to bridge the gap between learning technical skills and applying them in a professional environment. Through realistic projects, structured workflows, and practical assignments, participants gain valuable hands-on experience while developing the confidence needed for future internships and full-time roles. The program focuses on strengthening technical knowledge, problem-solving abilities, professional development practices, and project documentation skills, while also helping participants build a stronger portfolio that demonstrates their capabilities through meaningful work.

Growth Opportunities

The Experience Program is designed to help participants develop practical skills and demonstrate their potential through high-quality work. Exceptional submissions that showcase strong technical ability, professionalism, creativity, and problem-solving skills may be considered during WorkHatch's startup talent evaluation process. Depending on hiring requirements and the availability of suitable roles, outstanding participants may be informed about relevant opportunities. Additionally, your registered email may be used to share future program updates, new learning opportunities, and other career-related communications from OROVE.

Welcome to OROVE.

Learn with purpose. Practice with confidence. Build the experience that prepares you for real opportunities.
